Event: Workshop on Global Land-Surface Modeling

Dates: July 25-26, 2012

Location: Colorado State University, Fort Collins, CO

### Modeling Carbon Exchange

Model results will be reviewed to assess different methods for bounding the terrestrial role in the global carbon cycle. It is proposed that a series of climate model runs could be scoped that would tighten the limits on the “missing sink” of terrestrial carbon and could also direct future satellite image analyses to search for its geographical location and understand its seasonal dynamics.
